MC (Minimal Concern)Amazona amazonica

Date assessed	2021-10-22
Year published	2022
Eicat category	MC (Minimal Concern)
Justification for EICAT assessment	The Orange-winged Amazon nests in tree cavities, but no interactions with cavity-nesting birds have been observed. Competitive interference in Florida is minimized by the urban affinities of parrots in this region. The relative abundance and geographic distribution suggest that these parrots are unlikely to invade adjacent wilderness areas. To date it has a neglible competition impact on native cavity-nesting bird species (Diamond and Ross 2019).
Confidence rating	High
Mechanism(s) of maximum impact	Competition
Countries of most severe impact	U.S.A.
Description of impact	To date the Orange-winged Amazon has a neglible competition impact on native cavity-nesting bird species in Florida.
