**Common name**
nopal estricto (Spanish), common prickly pear (English), erect prickly pear (English), Araluen pear (English), common pest pear (English), gayndah pear (English), spiny pest pear (English), sour prickly pear (English), suurturksvy (English), pest pear of Australia (English), Australian pest pear (English), chumbera (Spanish), Feigenkaktus (German)

**Synonym**
- Cactus strictus, Haw.
- Opuntia airampo, Phil.
- Opuntia bartramii, Raf.
- Opuntia anahuacensis, Griffiths
- Opuntia atrocapensis, Small
- Opuntia dillenii, (KerGawl.) Haw.
- Opuntia gomei, Griffiths
- Opuntia gilvoalba, Griffiths
- Opuntia cyanella, Griffiths
- Opuntia bentonii, Griffiths
- Opuntia humilis, (Haw.) Haw.
- Opuntia inermis, (DC.) DC.
- Opuntia keyensis, Britton ex Small
- Opuntia laxiflora, Griffiths
- Opuntia longiclada, Griffiths
- Opuntia magnifica, Small
- Opuntia maritima, Raf.
- Opuntia nitens, Small
- Opuntia parva, A.Berger
- Opuntia spinalba, Raf.
- Opuntia stricta, (Haw.) Haw. var. dillenii (KerGawl.) L.D.Benson
- Opuntia tenuiflora, Small
- Opuntia zebrina, Small
- Opuntia horrida, Salm-Dyck ex DC.
- Opuntia tunoides, Gibbes
- Opuntia macrartha, Gibbes
- Cactus opuntia, L. var. inermisDC.

**Similar species**
- Opuntia ficus-indica

**Summary**
Opuntia stricta is a cactus that can grow up to 2 metres in height and originates in central America. This spiny shrub favours habitats such as rocky slopes, river banks and urban areas. Opuntia stricta was considered to be Australia's worst ever weed. Opuntia stricta is also invasive in South Africa, where biological options are currently being explored to control the problem.
Species Description
Spreading to an erect shrub to 2 metres. Basal stem-segments sometimes thickened, trunk-forming; upper segments elliptic to obovate, 10-35cm long, 7-20cm wide, glabrous, dull green to grey-green. Leaves conical, 4.5-6mm long. Spines up to 11 per areole, 1-6cm long, yellow to brown; glochids yellow. Flowers 5-6.5cm diam.; petaloid lobes spreading, yellow. Fruit obovoid with depressed apex, 4-6cm long, 2.5-4cm diam., purple. Seeds 4-5mm long, pale brown.” (George, 1984, In PIER, 2003)

Uses
Cultivated for Medicinal/culinary uses in some areas

Reproduction
Seed. The segments will take root from the "eyes" if left in contact with the ground, and because they are so succulent, they remain capable of rooting for several months after being detached from the parent plant. They can be moved in floods leading to infestations along river banks.

Pathway
This plant came to Australia on the first fleet, making it the oldest weed. Early settlers in Australia planted O. stricta for ornamental purposes and as hedges to keep cattle under control before barbed wire became affordable. (Australian Plants online, 1999)
