

*Antigonon leptopus*  [简体中文](#) [正體中文](#)

**System:** Terrestrial

Kingdom	Phylum	Class	Order	Family
Plantae	Magnoliophyta	Liliopsida	Liliales	Pontederiaceae

**Common name** love-vine (English), Sandwich Island creeper (English, India), hearts on a chain (English), chain-of-love (English), confederate vine (English), mountain rose (English), Mexican creeper (English), coral vine (English), coral bells (English), rohsapoak (English, Pohnpei), kadena de amor (English), corallita (English), flores ka'dena (English, Commonwealth of the Northern Mariana Islands), dilngau (English, Palau), queen's jewels (English)

**Synonym** *Corculum leptopum*, (Hook. & Arn.) Stuntz  
*Antigonon platypus*, Hook. & Arn.  
*Corculum leptopus*, (Hook. & Arn.) Stuntz  
*Antigonon cinerascens*, M.Martens & Galeotti  
*Antigonon cordatum*, M.Martens & Galeotti

## Similar species

**Summary** *Antigonon leptopus* is a smothering vine that invades disturbed areas and forest edges. It produces many seeds, which are spread by water currents and animals that consume the fruit. It has become invasive in some Pacific Islands, and is naturalised in many other parts of the Pacific.

[view this species on IUCN Red List](#)

## Species Description

*Antigonon leptopus* is a "Robust vine growing to 10m long or more; petioles 0.6-1.5cm long; leaf blades 2.5-7.5 (10)cm long, cordate-ovate, hastate-ovate, or triangular, prominent reticulately veined, acutish to acuminate (and often apiculate), the lower ones much larger; inflorescence paniculate, the branches bearing flowers in clusters along the rachis, the rachis tip tendrillate; flowers bright pink or white, enlarging 1-4 (5)cm long; achenes conical, sharply 3-angled above, calyx 6mm long, much exceeded by the veiny, persistent, enlarged perianth." (Welsh, 1998, in PIER, 2009)

## Notes

Extensively invading disturbed areas and forest edges on the northern half of Guam; much less so on Saipan, Tinian and Yap. Although only a few cultivated plants were noted on Pohnpei, it is apparently not a recent introduction, as it was noted in cultivation by Glassman (1952, in PIER, 2009). Invasive in the Virgin Islands (Fred Kraus, communication to Aliens Listserver, in PIER, 2009). Often escapes cultivation, (PIER, 2009).

## Uses

Ornamental

## Habitat Description

Prefers dry to moist lowland areas and limestone (basic) soils (PIER, 2009).

## Reproduction

Prolific seed producer. Seeds float on water, which helps transport them to new locations. Fruits and seeds are eaten and spread by domestic and wild animals such as birds and pigs, (PIER, 2009).

## General Impacts

*Antigonon leptopus* is a smothering vine that invades disturbed areas and forest edges, (PIER, 2009).

## Management Info

Preventative measures: A [Risk Assessment of \*Antigonon leptopus\*](#) for Hawai'i and other Pacific islands was prepared by Dr. Curtis Daehler (UH Botany) with funding from the Kaulunani Urban Forestry Program and US Forest Service. The alien plant screening system is derived from Pheloung et al. (1999) with minor modifications for use in Pacific islands (Daehler et al. 2004). The result is a score of 19 and a recommendation of: "Likely to cause significant ecological or economic harm in Hawai'i and on other Pacific Islands as determined by a high WRA score, which is based on published sources describing species biology and behaviour in Hawai'i and/or other parts of the world."

Physical: Cutting alone is ineffective. Underground tubers must be removed or plants will re-sprout (PIER, 2009).
