|---|---|
| Date assessed | 2021-09-16 |
| Year published | 2023 |
| Eicat category | MN (Minor) |
| Justification for EICAT assessment | The Eurasian Collared-dove was observed occupying the nest of American Robins (<i>Turdus migratorius</i>) and chasing them off the nest. After a couple of days the robins were not observed near the nest usurped by the collared-dove, which continued to occupy the nest. The doves subsequently fledged two young. There is no evidence that this has caused a decline of American Robins (Kasner and Pyeatt 2016). |
| Confidence rating | Low |
| Mechanism(s) of maximum impact | Competition |
| Countries of most severe impact | U.S.A. |
| Description of impact | The Eurasian collared-dove was observed occupying the nest of an American robin and evicting the robin in Texas. |
