Common name

Synonym

Rubus moluccanus, auct. non L.
Rubus roridus, auct. non Lindl.

Similar species

Summary

Rubus alceifolius is a climbing shrub native to Sumatra and Java that has been introduced in several islands of the Indian Ocean and Australia. When conditions are favorable, *R. alceifolius* develops dense, impenetrable monospecific cover up to several metres high, covering and smothering native herbaceous and shrubby vegetation.

[view this species on IUCN Red List](#)

Habitat Description

The plant grows in sunny places, invading forest hedges, roadsides, open places in natural forests or in fallows.

Reproduction

The genetic diversity analysis of *Rubus alceifolius* showed that populations in areas of introduction (Reunion, Mauritius, Mayotte, Australia) are clonal and genetically very different from those in native range, which showed high diversity. Madagascar populations appeared intermediate. The seed production is from apomixis in Reunion, while it is from allogamy within the native range. In Reunion, the seeds are produced from sea level up to 1100 m, while vegetative multiplication (cuttings, layerings) occurs from sea level until 1600 m (Dr. Thomas Le Bourgeois pers.comm., 17 February 2009).

Management Info

Biological: By the end of 2007, the biological control agent *Cibdela janthina* (Tenthredinidae, Argidae) native to Sumatra, has been introduced and released in La Réunion Island. By the end of 2008, the agent is considered acclimated and well established. It is spreading naturally up to 900m of elevation. Impact on *Rubus* thickets is promising but still under evaluation, as well as natural regeneration of the flora according to *Rubus* regression (Dr. Thomas Le Bourgeois pers.comm., 17 February 2009).

Summary: This compilation of information sources can be sorted on keywords for example: Baits & Lures, Non Target Species, Eradication, Monitoring, Risk Assessment, Weeds, Herbicides etc. This compilation is at present in Excel format, this will be web-enabled as a searchable database shortly. This version of the database has been developed by the IUCN SSC ISSG as part of an Overseas Territories Environmental Programme funded project XOT603 in partnership with the Cayman Islands Government - Department of Environment. The compilation is a work under progress, the ISSG will manage, maintain and enhance the database with current and newly published information, reports, journal articles etc.
