GLOBAL INVASIVE SPECIES DATABASE

FULL ACCOUNT FOR: ***Hypochaeris radicata***

Hypochaeris radicata 简体中文 正體中文

System: Terrestrial

Kingdom	Phylum	Class	Order	Family
Plantae	Magnoliophyta	Magnoliopsida	Asterales	Asteraceae

Common name

Synonym *Hypochaeris glabra* , auct. non L.

Similar species

Summary Hypochaeris radicata is an herbaceous perennial from the Mediterranean region. It has been introduced to the Americas, Japan, Australia and New Zealand. Hypochaeris radicata is found in disturbed areas, in pastures and meadows and beside roads and rivers. In the tropics, Hypochaeris radicata prefers higher altitudes. For example, in Hawaii it is found between 1100 and 2800m above sea level. It develops deep roots which are very attractive to wild pigs, who dig up large areas in search of the roots. It is regarded as one of the most invasive alien plants on the island of La Réunion.

Managment information

IUCN/SSC Invasive Species Specialist Group (ISSG)., 2010. A Compilation of Information Sources for Conservation Managers.
Summary: This compilation of information sources can be sorted on keywords for example: Baits & Lures, Non Target Species, Eradication, Monitoring, Risk Assessment, Weeds, Herbicides etc. This compilation is at present in Excel format, this will be web-enabled as a searchable database shortly. This version of the database has been developed by the IUCN SSC ISSG as part of an Overseas Territories Environmental Programme funded project XOT603 in partnership with the Cayman Islands Government - Department of Environment. The compilation is a work under progress, the ISSG will manage, maintain and enhance the database with current and newly published information, reports, journal articles etc.
