

Juncus tenuis [简体中文](#) [正體中文](#)

System: Terrestrial

Kingdom	Phylum	Class	Order	Family
Plantae	Magnoliophyta	Liliopsida	Juncales	Juncaceae

Common name field rush (English), slender rush (English), poverty rush (English), path rush (English), bull grass (English), slender yard rush (English), wiregrass (English), soft rush (English), jonc grêle (French)

Synonym *Juncus macer* , S.F. Gray
Juncus tenuis , var. *anthelatus* Wieg.
Juncus tenuis , var. *multicornis* E. Mey.
Juncus tenuis , var. *williamsii* Fern.

Similar species

Summary *Juncus tenuis* is a rush introduced to countries worldwide. It may affect native species through competition with other plants and the alteration of valuable native habitats. For example, in Saint Helena *J. tenuis* reduces the suitability of nesting sites for the 'Critically Endangered (CR)' endemic wirebird *Charadrius sanctaehelenae*.

Species Description

Juncus tenuis is a perennial herb; stems 1 to 6 dm long, 1 to 2 mm in diameter, loosely cespitose. Leaves basal, numerous and crowded, blades variable in length, 7 to 30 cm long, 1 to 1.3 mm wide, sheaths loose with wide hyaline margins prolonged into white scarious auricles up to 5 mm long. Flowers (3-) numerous, borne singly on 1 side of rachis, in relatively compact dichasial cymes 1 to 7 cm long, forming less than 1/3 of plant, bracts 2 to 3, foliaceous, usually far exceeding inflorescence, each flower subtended by 2 bracteoles, these hyaline, triangular-ovate; perianth parts greenish, lanceolate, 3 to 4.5 mm long, apex long-acuminate, outer ones slightly reflexed at apex, inner ones with wide hyaline margins below; stamens 6, 1/2 as long as perianth; anthers shorter than filaments. Capsules reddish brown, 1-celled, broadly ovoid, thin-walled, slightly beaked, 2/3 to rarely scarcely shorter than perianth. Seeds pale brown, oblong, 0.3 to 0.4 mm long, slightly apiculate at both ends (Wagner *et al.* 1999, in PIER 2007).

Habitat Description

Juncus tenuis is found naturalised in Hawaii usually in wet sites along trails, disturbed places, and pastures at altitudes of 700 to 2000 meters (Wagner *et al.* 1999, in PIER 2007).

General Impacts

The Global Compendium of Weeds lists *Juncus tenuis* as an agricultural weed, casual alien, cultivation escape and environmental weed (GCW 2007).

J. tenuis has proven to be an ecological weed on Saint Helena where it alters valuable native habitats including breeding and nesting sites of the 'Critically Endangered (CR)' endemic wirebird (see [Charadrius sanctaehelenae in IUCN Red List of Threatened Species](#)) (Varnham 2006).
