## Trididemnum solidum

System: Marine

Kingdom	Phylum	Class	Order	Family
Animalia	Chordata	Ascidiacea	Enterogona	Didemnidae
Common name	Mattenseescheide (English), ascidie blanche encro�tante (English), sinascidia entapizante (English), overgrowing mat tunicate (English)			
Synonym	Didemnum solidum			
Similar species				
Summary	The colonial ascidia Trididemnum solidum is present throughout the West Indies to Florida, the Bahamas to Venezuela. T. solidum grow as mat like sheets that can grow over coral, sponges and macroalgae. It is widespread in the Netherland Antilles. A nine fold increase over a 15 year period was recorded along the 84 km of fringing reef in Curacao. Here it forms large mats actively outcompeting, overgrowing and killing live coral. T. solidum is a bacterial suspension feeder and bacterial increases in the environment have been implicated in its rapid increase in the Caribbean. The increased eutrophication has been linked to human activity and urban development.

## Reproduction

圖關

*Trididemnum solidum* are viviparous and start reproducing when they reach a size of 11-15 cm. In Curacao and Panama *T. solidum* is capable of breeding throughout the year, and maybe only limited by adverse conditions. The larvae have a short free-swimming period and settle very quickly showing a preference for natural coral rock over smooth clean surfaces. The larvae after settlement remian inactive for 3-4 weeks before growing out into small colonies. Colonies grow into 4-5 mm thick whitish to purple coloured mats that may grow over 1 m (Van Duyl *et al* 1981).

## **Management Info**

An attempt was made on Bonaire to remove *Trididemnum solidum* colonies. Colonies were removed from depths of 4 to 25 m. When the sites were examined 6 weeks later, *T. solidum* recruits with a mean diameter of 25 cm, were found on 20% of the sites. Monitoring is continuing (Mcgrath and Peachey 2008).

#### **Managment information**

IUCN/SSC Invasive Species Specialist Group (ISSG)., 2010. A Compilation of Information Sources for Conservation Managers.

**Summary:** This compilation of information sources can be sorted on keywords for example: Baits & Lures, Non Target Species, Eradication, Monitoring, Risk Assessment, Weeds, Herbicides etc. This compilation is at present in Excel format, this will be web-enabled as a searchable database shortly. This version of the database has been developed by the IUCN SSC ISSG as part of an Overseas Territories Environmental Programme funded project XOT603 in partnership with the Cayman Islands Government - Department of Environment. The compilation is a work under progress, the ISSG will manage, maintain and enhance the database with current and newly published information, reports, journal articles etc.
