

Epipremnum pinnatum

System: Terrestrial

Kingdom	Phylum	Class	Order	Family
Plantae	Magnoliophyta	Liliopsida	Arales	Araceae

Common name enredadera (Spanish), devil's ivy (English), long wei cao (Chinese), ara (English, Cook Islands), centipede tongavine (English), pothos (English), money plant (English), golden pothos (English), gefleckte Efeutute (German), cortina (Spanish), selkasohlap (English, Pohnpei), variegated-philodendron (English), Tongavine (English), taro vine (English)

Synonym *Epipremnum mirabile* , Schott
Philodendron nechodomae , Britton
Pothos pinnatus , L.
Rhaphidophora merrillii , Engl.
Scindapsus aureus , (Lindl. & Andr.) Engl.

Similar species

Summary Pothos vine (*Epipremnum pinnatum*) is a common escaped garden vine. It climbs up tree trunks and into the forest canopy, primarily in disturbed areas and along roadsides, smothering native plants. The plant is poisonous when eaten and can cause minor skin irritation when touched.

Management Info

Preventative measures: A [Risk Assessment of *Epipremnum pinnatum*](#) for the Pacific Region was prepared by Dr. Curtis Daehler (UH Botany) with funding from the Kaulunani Urban Forestry Program and US Forest Service. The alien plant screening system is derived from Pheloung *et al.* (1999) with minor modifications for use in Pacific islands (Daehler *et al.* 2004). The result is a high score of 9 and a recommendation of: "Likely to cause significant ecological or economic harm in Hawaii and on other Pacific Islands as determined by a high WRA score, which is based on published sources describing species biology and behavior in Hawaii and/or other parts of the world."

A [Risk Assessment of *Epipremnum pinnatum*](#) for Florida in the USA returned a high score of 11 with a recommendation to 'reject' the plant for import.
