

## ***Acacia auriculiformis***

**System:** Terrestrial

Kingdom	Phylum	Class	Order	Family
Plantae	Magnoliophyta	Magnoliopsida	Fabales	Fabaceae

**Common name**

**Synonym**

**Similar species**

**Summary**

[view this species on IUCN Red List](#)

### General Impacts

**Competition** - *Acacia auriculiformis* was found to reduce species richness compared to natural (even degraded) forests, thus, indicating that *A. auriculiformis* outcompetes native species.

**Indirect impacts through interactions with other species** - *A. auriculiformis* indirectly affects the number of bird species in *Acacia* plantations, with twice as many species found in natural forests.
