

Waterhousea floribunda

简体中文

正體中文

System: Terrestrial

Kingdom	Phylum	Class	Order	Family
Plantae	Magnoliophyta	Magnoliopsida	Myrales	Myrtaceae

Common name weeping lilly pilly (English), weeping myrtle (English)

Synonym
Syzygium floribundum, F. Muell.
Eugenia floribunda
Syzygium floribunda

Similar species

Summary A native of Australia, *Waterhousea floribunda* grows up to 30 metres in height and has attractive weeping branches, which are used for shade and shelter. This tree has been introduced into French Polynesia and has become invasive on the Island of Moorea. The fruit is eaten and dispersed by birds; a fact to be mindful of when considering control methods or preventative measures for this plant.

Species Description

"Tree up to 30m tall, stem diameter up to 80cm, large trees often flanged at base, branches pendulous. Leaves with petioles 2-8mm long; blades narrowly oblong-ovate to narrowly oblong-elliptic, apex drawn out to pointed or rounded tip, base cuneate, margin slightly recurved, 5.5-17cm X 1.3-5cm, dark green and glossy above, dull and paler below, main lateral veins 15-40 pairs, oil glands numerous, fairly distinct. Flowers in panicles, pedicels up to 3mm long; hypanthium campanulate, calyx 3mm long; sepals 5, less than 1mm long; petals white, 5, imbricate, mostly cohering slightly and forming calyptra which is shed when flower opens; stamens ca 3-7mm long; style 4-10mm long. Fruits greenish, depressed globular, 1.3-2cm diameter, crowned by persistent calyx lobes." (PIER, 2002)

Uses

Popularly used as shade/shelter in Australia

Habitat Description

Present in Tahiti and Moorea, French Polynesia. Mesic and wet low- to mid-elevation sites (mean annual rainfall > 1,500mm ; elevation < 600m in the Society Is.) (Jean-Yves Meyer, pers. comm. 2004).

Reproduction

Fleshy fruits dispersed by birds. (PIER, 2002)

General Impacts

Forms dense stands.
