EICAT profile: Streptopelia decaocto

## MN (Minor)Streptopelia decaocto

Date assessed 2021-09-16 2023 Year published MN (Minor) **Eicat category Justification for EICAT** assessment The Eurasian Collared-dove was observed occuping the nest of American Robins (Turdus migratorius) and chasing them off the nest. After a couple of days the robins were not observed near the nest usurped by the collared-dove, which continued to occupy the nest. The doves subsequently fledged two young. There is no evidence that this has caused a decline of American Robins (Kasner and Pyeatt 2016). Low Confidence rating Competition Mechanism(s) of maximum impact **Countries of most severe** U.S.A. impact **Description of impact** The Eurasian collared-dove was observed occupying the nest of an American robin and evicting the robin in Texas. Tom Allmert; Thomas Evans **Assessor Contributors** Reviewers EICAT authority Recommended citation Tom Allmert; Thomas Evans. (2025). Streptopelia decaocto . <u>IUCN Environmental Impact Classification</u> for Alien Taxa (EICAT).
