MO (Moderate)Pelophylax bedriagae

Date assessed	2020-09-01
Year published	
Eicat category	MO (Moderate)
Justification for EICAT assessment	Hybridisation between Pelophylax bedriagae and the impacted species is common and extensive where they co-occur (Holsbeek et al. 2008, 2010), recovery of pure native population might be difficult.
Confidence rating	HIgh
Mechanism(s) of maximum impact	Hybridisation
Countries of most severe impact	Belgium
Description of impact	Hybridisation- extensive hybridization between the introduced Pelophylax bedriagae and P. ridibundus and has been reported in Belgium. Pelophylax bedriagae also hybridize with the threatened Pelophylax esculentus.
