

**MN (Minor)** *Fejervarya kawamurai*

<b>Date assessed</b>	2020-09-01
<b>Year published</b>	2021
<b>Eicat category</b>	MN (Minor)
<b>Justification for EICAT assessment</b>	Although <i>F. kawamurai</i> largely preys on arthropods, it is uncertain whether the prey is of native or non-native origin (Takeuchi et al. 2019). There also has been no indication of population decline of any species consumed by <i>F. kawamurai</i> .
<b>Confidence rating</b>	Low
<b>Mechanism(s) of maximum impact</b>	Predation
<b>Countries of most severe impact</b>	Japan
<b>Description of impact</b>	Predation - stomach content showed that the Japanese Rice Frog ( <i>F. kawamurai</i> ) preys primarily on arthropods, but also other taxa. However, prey was not identified to the species level.
<b>Assessor</b>	Alexander D. Rebelo; James Baxter-Gilbert
