

## MN (Minor) *Glandirana rugosa*

<b>Date assessed</b>	2020-09-01
<b>Year published</b>	2021
<b>Eicat category</b>	MN (Minor)
<b>Justification for EICAT assessment</b>	G. rugosa is a predator that preys on both native and non-native species, the decline in population size of endemic Hawaiian insects and snails can not be attributed to the presence of G. rugosa alone (Van Kleeck & Holland 2018). However it is likely that G. rugosa preys on native species and effects the performance of native individuals.
<b>Confidence rating</b>	Low
<b>Mechanism(s) of maximum impact</b>	Predation
<b>Countries of most severe impact</b>	U.S.A.
<b>Description of impact</b>	Predation- In Hawai'i, the Japanese wrinkled frog, <i>Glandirana rugosa</i> preys on insects and snails.
