

MN (Minor) *Lophura leucomelanos*

Date assessed	2021-10-07
Year published	2023
Eicat category	MN (Minor)
Justification for EICAT assessment	Kalij Pheasants prey on insects. There is no evidence that this has caused a decline of these species (Navas 1987).
Confidence rating	Low
Mechanism(s) of maximum impact	Predation
Countries of most severe impact	Argentina
Description of impact	The Kalij Pheasant feeds on native plant and insects species and competes with the native fauna in Argentina. They also disperse alien/invasive seeds in Hawaii.
Assessor	Tom Allmert; Thomas Evans
Contributors	
Reviewers	EICAT authority
Recommended citation	Tom Allmert; Thomas Evans. (2026). <i>Lophura leucomelanos</i> . IUCN Environmental Impact Classification for Alien Taxa (EICAT) .
